STARK & WAYNE

About Stark & Wayne
Stark & Wayne is a leading cloud agnostic technology consulting firm, offering: architecture design, implementation, and operations enablement. These services empower enterprises to operate highly available and extensible platforms on their chosen infrastructure(s).

Stark & Wayne engineers bring years of experience and a strong passion for cloud development and automation. We have the expertise to help your organization transition to Cloud Foundry or any type of multi-cloud you might need, on premises or in the public cloud.

Cloud Foundry Platform Services

Every company has unique capabilities and requirements. At Stark & Wayne, we are prepared to handle every nuance of your infrastructure and and platform. While we're happy to recommend our favorite tools and processes, we want to make sure you are using your preferred tools effectively.

Platform Management
Stark & Wayne can manage your Cloud Foundry platform with a subscription to our Pivotal Cloud Foundry Managed Services. We take care of upgrades, maintenance, and provide pro-active health checks on a regular basis to ensure that your platform runs smoothly with minimal downtime.

Platform Enablement
Stark & Wayne believes that a well-constructed training program can provide your team of operators the foundation they need to manage your Cloud Foundry platform(s) efficiently and effectively. Our proven experience and deep system know-how are the basis for the training programs we develop to make your platform operators successful. We understand what operators need and design our training programs accordingly.

We can also be called on to help your team set up their Cloud Foundry properly or assist with any facet of Cloud Foundry platform management.

- **Design Leadership –** Stark & Wayne works with you to ensure that the right capabilities are incorporated into your platform and that they meet industry standards.

- **Enablement –** We teach our industry-leading methodology and architecture to the team so they can manage their own Cloud Foundry platform(s).

- **Vision –** We advise on how to create a forward-looking backlog so that companies can focus on their competitive advantages instead of getting bogged down unexpected platform problems.

- **Implementation –** We drive success and work alongside your team to streamline implementation, using a balanced approach of onsite, remote, and pairing models that are efficient and effective.

Platform Automation

Stark & Wayne runs dozens of production pipelines for our open source software and client projects. We can improve your company's pipelining to maximize continuous delivery. Learning Concourse CI in a few hours will empower your company and introduce new efficiencies through automation.

Disaster Recovery

No matter how much you think your application, database, or platform is bulletproof, the possibility that any of those can fail still exists. When one or more of them fail, Stark & Wayne can help you minimize downtime and get you on the road to recovery. Once recovered, Stark & Wayne can help you plan ahead to improve the efficiency and effectiveness of your recovery strategy.

Application Migration

Using Cloud Foundry, application developers can quickly achieve greater success with just a little extra guidance and experience. Stark & Wayne can help your application developers deploy applications faster than you ever thought possible using languages they already know and love.

Runbooks

Each enterprise client has unique requirements for documentation. Stark & Wayne can author and maintain client runbooks that satisfy each client requirement while adhering to compliance and audit standards, financial management responsibilities, and methodical change management practices. These runbooks are designed to be living, digital, dynamic documents instead of using traditional documentation methods.
